CMS CoP Compliance Forecaster

An all-new C&A publication in 2010, the *CMS CoP Compliance Forecaster* aids your healthcare organization in tracking compliance with each CMS Condition of Participation (CoP), standard, tag and requirement. This electronic workbook is organized with individual worksheets for each CoP, featuring columns organized by tag and requirement. Each sheet also features columns which allow organizations to input findings, corrective action needed, responsible staff, and estimated date of completion for any deficiencies in compliance. Finally, healthcare organizations have one simple method for tracking compliance with all of the CoPs in one convenient electronic document.

Score Ongoing Accreditation Readiness—SOAR to Success

Hospital, Behavioral, Ambulatory, Home Care, Long Term Care, Critical Access Hospital & Disease Specific Certification

S.O.A.R. to Success puts you in charge of your assessment process, all on your own schedule. Each version will help you and your facility become familiar with new requirements and scoring changes while preparing for your Periodic Performance Review. It comes in convenient electronic format for convenient use and reference. The SOAR Series was designed for healthcare organizations who seek convenient ways to achieve or maintain their accreditation. All editions are updated with the most recent TJC standards and scoring information from TJC.

Life Safety Document Review Organizer System

This guideline and organizer system was developed to provide an easy and systematic manner to organize all documents necessary to meet the Life Safety Specialist document review requirements for The Joint Commission (TJC). Since these documents are requested on the first morning of an unannounced (surprise!) survey, it is imperative that healthcare organizations maintain this key Life Safety (LS) and Environment of Care (EC) documentation in an organized manner and have it readily available at all times.

A Quick Reference for Hospital Accreditation & Regulatory Requirements

Is a policy necessary to meet this standard? Does this Element of Performance require a formalized protocol? Should this issue be included in staff orientation and training? This electronic publication provides healthcare professionals with a simple guide to the documentation requirements of The Joint Commission, and it will guide you through the multitude of accreditation requirements and assist you in streamlining your efforts to facilitate compliance.

Simplifying Regulatory Compliance: A Crosswalk of TJC & CMS Requirements

This electronic resource compares and contrasts the most recent requirements of The Centers for Medicare & Medicaid Services (CMS) and The Joint Commission (TJC). Not only will this tool help you effectively navigate the CMS and TJC requirements, but you will also understand that many conditions of participation correlate with the existing TJC standards. You can now satisfy multiple regulatory requirements without duplicating your efforts.
